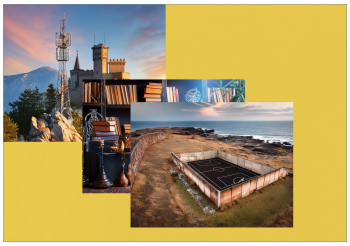
Lab — Collage, Chroma Key

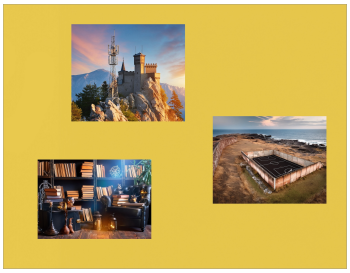
Task 1 — Collage

In class we saw how to copy an image to a certain part of a blank canvas. For Task 1, pick three (small) images and place them on an image, trying not to have them fully overlap.



Task 2 — Collage, cont.

Refine your code from Task 1 so that the three images do not overlap at all. There can be space around the images. The background image can be blank or an image of your choosing.)



Task 3 - Chroma Key

Modify our chroma key code to use colormath's `delta_e_cie2000` method to calculate color distance. It is recommended that you use a small image for this.

Deliverable

Submit all code and images used and provide comments to explain your process.
